

VIROXX E150++

YOUR BENEFITS

- Inactivation of viruses, germs and pathogens
- Healthy and odorless indoor air
- Reduction of fine dust
- Mobile use
- Low energy consumption
- Certified effectiveness

APPLICATIONS

- Living spaces
- Office and meeting rooms
- Medical facilities and waiting rooms
- Wellness areas, gyms
- Lounges
- Bars and clubs
- Senior residences
- Hotel rooms, lobbies and many more

AIR STERILIZATION SYSTEMS

Reduction of viruses

Reduction of bacteria

Reduction of mold

Effective against odors

Healthy Indoor Air

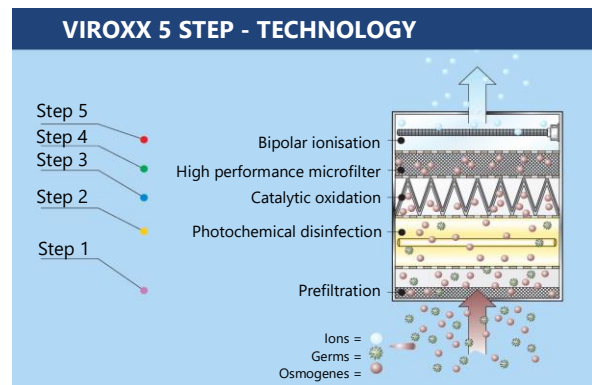

Safe working conditions thanks to optimal indoor air hygiene

Pure air quality for healthy living and working.

Bring fresh and clean air into your everyday life - whether for relaxation at home, a pleasant feel-good climate for your customers or for better concentration and efficiency at work and in the office environment. Healthy, low-germ air conditions are not only a hygienic requirement in current times, they also quickly become apparent in the business environment as a calculable economic factor. The results of good indoor air as an important part of exemplary and safe workplace conditions can be seen in improved performance, fewer illnesses and fewer signs of fatigue. Prevent the 'sick building syndrome' today - your employees will thank you.

Nature as a role model

In nature, a thunderstorm releases electrical discharges and, by doing that, emits high concentrations of ions. Those ions play a major role to lower the amount of pollutants and are a key player for providing us with fresh and clean air in nature. The principle of our air treatment is comparable to this natural phenomenon. Activated oxygen sets in motion an oxidation process that chemically changes odor molecules and germs. New, harmless substances are formed. In combination with photooxidation, this process damages the cell structure of viruses, mold spores and bacteria so sustainably that they are inactivated - and thus acts as a natural cleaning agent in the room air.

Don't give germs a chance

Through targeted disinfection and air treatment with **VIROXX E150++**, you reduce pollutants, inhibit pollen, eliminate unpleasant odors and thus ensure a noticeably better indoor climate. Dangerous viruses (Ebola, SARS, swine flu etc.), germs (MRSA, 3MRGN, 4MRGN), as well as many other pathogens in the air have been

proven¹ to be reliably inactivated and reduced. The innovative Viroxx technology impresses with its unique combination of photochemical disinfection and bipolar ionization - the effects of this being more important today than ever before.

You certainly cannot live without breathing - but you can live without bad air.
